S s S s S s

Roman. Black Letter. Script.

S, s, es, *n.* [s's, S's, or Ss, es'ez, *pl.*] **1.** A letter: the nineteenth in the English alphabet; in Bell's "Visible Speech," ʊ; the sign of a hissing consonant, beginning a syllable as in *so*, closing a syllable as in *us*, or a syllabic surd as in *amidst*, the vocal cords being open and the nose closed. It is called a sibilant, a lingual, a dental, a tongue-tip, and a continuous consonant, sometimes a semivowel.

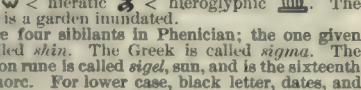
The tongue-front is raised nearly to the roof of the mouth just above the front teeth, an opening is left at the blade just behind the tip, and hissing breath makes the common *s*, Visible Speech ʊ. When the opening begins farther back near the y position, and the breath hisses through a channel to the tip, it makes *sh*, Visible Speech ʃ. If the vocal cords be closed so as to vibrate, *s* will change to *z*, Visible Speech ʊ; *sh* to *zh*, ʒ. If the tongue-point be lowered to the teeth, *th*, ʊ, and *dh*, ʊ, are made. If the tongue-tip vibrate *r* is made. If it be touched tight *t* is made.

The continuous consonants are often stopped with a tight closure, by which *t* is added to final *s*, as *whiles, whilst*. The digraphs *st, sp, sc* = *sk* escape Grimm's law, as if single sibilants; and alliterate so in Germanic verse. In French an initial *s* is often used to indicate the syllabic quantity of *s* in these digraphs: *espace*, space; *estomac*, stomach. *S* is the only hissing letter in Latin or Anglo-Saxon; *r* (not *z*) is its sonant. In Middle English *z* appears as sonant *s*; *sh* also appears as a softening in *sce, sci*, as *sceo*, shoe, *scip*, ship; and in modern English becomes abundant for *si* = *sy, ti*, as in *mission, nation*. Its sonant *zh*, as in *decision*, is first noticed in 1688, and although *s, z, sh, zh* are well-known signs of these sounds, *s* is still used most frequently for all of them in standard print. Few languages have signs to distinguish *s* and *z*. *Sh, zh* are found as elements also in *ch* = *tsh* and the Greek rough breathing *j* = soft *g* = *dzh*. *S* freely assimilates, softens (in Greek, to ', *h*), and drops.

Other tongue-letters change to *s*, all running to the tongue-tip as easiest moved, as *c* = *k* before *e* or *i* (see C), *t, d, th, dh*, as in *amut, loveth, loves*. Sonant labials *b, m* are assimilated by *s*.

Hissing is natural breath-gesture, and is taken freely into artificial speech, retaining something of its natural habit. The hiss of dislike (*s*), that urging a dog to fight (*st*), and that hushing a child (*sh*) are familiar. *S* can be made alone: *That's so;* be prolonged at will; be made before, after, or between other letters; be consonantal or syllabic; and it has much of onomatope.

In English *s* > *z* is the main inflection-sign, the only living sign of case and number in nouns, the only living personal ending of verbs, save the old *st*. See Z.



In the pronunciation of this dictionary *s* is used only for its first sound as above described. The other sounds which it represents in common print are represented by *sh, z, zh*, etc.

The sound *s* is fifth in frequency of the consonants and seventh of the elementary sounds in English, averaging 4.69 per cent. of the sounds on the pages of the literature. *Z* averages 2.92 per cent., *r*, the first, 7.44. WHITNEY *Oriental and Linguistic Studies* second series, p. 274. [s. '74.]

Capital S is from Latin S < early Gr. Lat. Ϛ Ɛ ξ < Phenician ש < hieratic ☧ < hieroglyphic 𓋴. The hieroglyph is a garden inundated.

There are four sibilants in Phenician; the one given here is called *shin*. The Greek is called *sigma*. The Anglo-Saxon rune is called *sigel*, sun, and is the sixteenth in the futhorc. For lower case, black letter, dates, and the like, see A.

The history of the characters is represented as follows:

Hiero-glyphic Garden. Egyptian Hieratic. Phenician. Early Greek. Roman. English Script.

2. An abbreviation: (1) South. (2) [s] Shilling. (3) [s] Second (of time). (4) [s] Substantive. (5) In physicians' prescriptions, half (Latin *semi*). (6) *Her.* Sable. For other abbreviations, see ABBREVIATIONS, in Appendix. **3.** A symbol noting: (1) In the Roman notation of the middle ages, 7 or 70; with a dash over it (S), 70,000. (2) *Chem.* Sulfur. (3) *Math.* (*a*) The scalar part of a quaternion. (*b*) In the Greek form (Σ), the sum of a certain class or series of values. The limits between which the summation is to be made are often written above and below; thus, $\sum_{n=7}^{n=3} n$ signifies 3+4+5+6+7. (*c*) [s] The length of an arc.

—**S bracket, S piece,** in mechanical construction, a bracket or other piece in the shape of the letter S.—**S brake,** a railway-brake having on a rock-shaft an S-shaped lever with a shoe on each end, arranged to press against the upper edge of one wheel and the lower edge of the opposite wheel on the same side of the truck.—**S curve,** a curve shaped like an S; a sigmoid curve.

's. *Gram.* The sign or suffix of the possessive or genitive case singular and of the same case plural when the noun ends in *n;* as, men's lives; children's books; shortened since the 17th century from Middle English *-es*. The apostrophe now replaces the *e*. See APOSTROPHE; POSSESSIVE CASE. Some words ending in a sibilant omit the *s* of the possessive to avoid the disagreeable repetition of a hissing sound. The rules formulated for this work are as follow: (1) Singular monosyllabic nouns ending in a sibilant sound *ss, x, ce, se*, or dental *ge* add the apostrophe and *s*, except when the following word begins with a sibilant sound, as, *James's* reign; *Jones's* hat; a *fox'* skin. (2) Singular disyllabic nouns ending in a sibilant sound add the apostrophe and *s*, unless the sibilant is preceded by another sibilant or the last syllable is unaccented; as, *Perus'* defeat; *Moses'* face; *Jesus'* disciples; *Laplace's* theory; *Hortense's* fate. (3) Singular polysyllabic nouns ending in a sibilant sound add the apostrophe and *s* only when a principal or secondary accent falls on the last syllable; as, *Boniface's* mistake; *Quackenbos's* Rhetoric; *Orosius's* History. [ME. *-es, -is*, < AS. *-es*, < Parent Speech *-as*.]

-s¹, *Gram.* The common plural sign in Parent Speech; in Anglo-Saxon, the plural sign of masculine *a*-stems, making the ending *-as*. The *a* weakened to *e* in Middle English, and has dropped in modern English, except after sibilants: *heofonas*, > *hevenes*, > heavens; *fiscas*, > fishes. [Same as -ES (1).]

-s², The ending of the third person singular present indicative of the verb. It comes from the demonstrative pronoun, Parent Speech, Greek, Latin *s* (*to*), > Anglo-Saxon *th* (*that*): Latin *amat*, loveth, means *love* + *that one*. The change of *-th* to *-s*, a regular weakening (see S), occurred first in Northumbrian and only lately has become universal. See TENSE-ENDING.

Of the transition of the spirant *th* into the sibilant *s* a notable example is offered in our substitution—now become universal except in antiquated and solemn styles—of *he loves* for *he loveth*. WHITNEY *Lang. and Study of Lang.* lect. III, p. 93. [s. '67.] [Same as -ES (2).]

Synonyms: First-day, Lord's day, Sunday. *Sabbath* carries a more direct reference to the Mosaic economy, with a suggestion of sacred rest that is not in the name *Sunday* (*dies solis*), given by the heathen to the first day of the week; *Lord's day* denotes the first day of the week as that of Christ's resurrection. *First-day* is the name given by the Friends, who have similarly renamed all the days of the week in order to avoid the supposed tribute given by the common names to heathen objects of worship.

(2) In the Roman, Greek, and some other churches, such a rite instituted directly by Christ and deriving from this fact an inherent efficacy.

Seven sacraments are recognized by the Greek and Roman Catholic churches—baptism, confirmation, the eucharist, penance, holy orders, matrimony, and extreme unction (or in the Greek Church unction of the sick). Baptism, confirmation, and holy orders are held to leave a permanent impress on the soul. Baptism and the Lord's Supper are recognized as Christian ordinances (and to be literally observed) by almost all Christians. Sacraments are regarded by various Christian bodies (1) as channels of grace, (2) as the seal of God's promises of grace, or (3) as a sign, pledge, or badge on the part of the recipient of his Christian profession. Some hold one or two of these views to the exclusion of the remainder. The word is sometimes applied to the ordinances of the old dispensation; as, the Mosaic *sacrament* of circumcision.

2. Specifically, the Lord's Supper; the eucharist; as, the sick man received the *sacrament*. The term is rejected by the "Christian Church" and some others as unscriptural and antiscriptural.

Synonyms: ceremony, communion, eucharist, Lord's Supper, observance, ordinance, rite; service, solemnity. A *ceremony* is a form expressing reverence, or at least respect; we may speak of religious *ceremonies*, the *ceremonies* of polite society, the *ceremonies* of a coronation, an inauguration, etc. An *observance* has more than a formal obligation, reaching or approaching a religious sacredness; a stated religious *observance* viewed as established by authority is called an *ordinance;* viewed as an established custom, it is a *rite*. Any religious act, especially a public act, viewed as a means of serving God is called a *service*. The terms *sacrament* and *ordinance* in the religious sense are often used interchangeably; the *ordinance* derives its sacredness from the authority that ordained it, while the *sacrament* possesses a sacredness due to something in itself, even when viewed simply as a representation or memorial. The Lord's Supper is the Scriptural name for the *observance* commemorating the death of Christ; the word *communion* is once applied to it (*1 Cor.* x, 16), but not as a distinctive name; at an early period, however, the name *communion* was so applied, as denoting the communing of Christians with their Lord, or with one another. The term *eucharist* describes the Lord's Supper as a thanksgiving *service;* it is also called by preeminence *the sacrament*, as the ratifying of a solemn vow of consecration to Christ.

Synonyms: able, acute, apt, clear-sighted, discerning, intelligent, keen, keen-sighted, keen-witted, judicious, perspicacious, quick of scent, quick-scented, rational, sage, sensible, sharp, sharp-witted, shrewd, wise. *Sagacious* refers to a power of tracing the hidden or recondite by slight indications, as by instinct or intuition; it is not now applied to mere keenness of sense-perception. We do not call a hound *sagacious* in following a clear trail; but if he loses the scent, as at the edge of a stream, and circles around till he strikes it again, his conduct is said to be *sagacious*. In human affairs *sagacious* refers to a power of ready, far-reaching, and accurate inference from observed facts perhaps in themselves very slight, that seems like a special sense; or to a similar readiness to foresee the results of any action, especially upon human motives or conduct—a kind of prophetic common sense. *Sagacious* is a broader and nobler word than *shrewd*, and not capable of the invidious sense which the latter word often bears; on the other hand, *sagacious* is less lofty and comprehensive than *wise* in its full sense, and more limited to matters of direct practical moment. Azara gives the word as *caï*, which French writers twisted and compounded. Buffon called the larger American monkeys *sapajous* and the smaller (cebine) species *saguins*, these terms, he says, being his own modifications of *cayouasou* and *cagoni*; but Azara informs us that the real words are *caigouazou* (pronounced with the *c* hard) and *cai* (pronounced *kay*), the latter meaning simply 'monkey' and the former 'great monkey.' This word seems to appear in composition in such names as *caiarara*; while the form *cai* enters perhaps into *saki*, etc. *Sajou* is said to be derived from *cagoni*, and properly to be restricted to the genus *Cebus*; but Wallace writes it *sapajou*. Synonyms: allowance, compensation, earnings, fee, hire, honorarium, pay, recompense, remuneration, stipend, wages. An *allowance* is a stipulated amount furnished at regular intervals as a matter of discretion or gratuity, as of food to besieged soldiers, or of money to a child or ward. *Compensation* is a return for a service done. *Remuneration* is applied to matters of great amount or importance. *Recompense* is a still wider and loftier word, with less suggestion of calculation and market value; there are services for which affection and gratitude are the sole and sufficient *recompense*. *Pay* is commercial, and strictly signifies an exact pecuniary equivalent for a thing or service, except when the contrary is expressly stated, as when we speak of high *pay* or poor *pay*. *Wages* denotes what a worker receives. *Earnings* is often used as exactly equivalent to *wages*, but may be used with reference to the real value of work done or service rendered, and even applied to inanimate things; as, the *earnings* of capital. *Hire* is distinctly mercenary or menial, but as a noun has gone out of popular use, though the verb *to hire* is common. *Salary* is for literary or professional work, *wages* for handicraft or other comparatively inferior service; a *salary* is regarded as more permanent than *wages*; an editor receives a *salary*, a compositor receives *wages*. *Stipend* has become exclusively a literary word. 2. An auction. **3.** *Law.* (1) A contract for the transfer of property from one person to another for a valuable consideration. 2 KENT *Comm.* p. 468. (2) A contract to give and to pass rights of property for money which the buyer pays or promises to pay to the seller for the thing bought and sold. 8 HOWARD *Rep.* pp. 495, 544. (3) Transfer of property from one person to another for a consideration of value, without reference to the particular mode in which the consideration is paid. 8 ALLEN *Rep.* p. 297.

Kent's definition of "sale" is open to the criticism of including both barter and exchange. Benjamin, in his work on *Sales* (p. 1), defines a sale as "a transfer of the absolute or general property in a thing for a price in money." He specifies, as the essentials of a valid sale, (1) parties competent to contract, (2) mutual assent, (3) a thing the absolute or general property in which is transferred from the buyer to the seller, and (4) a price in money paid or promised.

4. Opportunity of selling; demand by purchasers; market; as, stocks find no *sale*. [< AS. *sala*, < *sellan*, sell.]

Synonyms: bargain, barter, change, deal, exchange, trade. A *bargain* is strictly an agreement or contract to buy and sell (see CONTRACT), though the word is often used to denote the entire transaction and also as a designation for the thing sold or purchased. *Change* and *exchange* are words of wider signification, applying only incidentally to the transfer of property or value; a *change* secures something different in any way or by any means; an *exchange* secures something as an equivalent or return, though not necessarily as payment for what is given. *Barter* is the *exchange* of one commodity for another, the word being used generally with reference to portable commodities. *Trade* in the broad sense may apply to vast businesses (as the book-*trade*), but as denoting a single transaction is used chiefly in regard to things of moderate value, when it becomes nearly synonymous with *barter*. *Sale* is commonly, and with increasing strictness, limited to the transfer of property for money, or for something estimated at a money value or considered as equivalent to so much money (compare definition 3). A *deal* in the political sense is a bargain, substitution, or transfer for the benefit of certain persons or parties against all others; as, the nomination was the result of a *deal*; in business it may have a similar meaning, but it frequently signifies simply a *sale* or *exchange*, a dealing; as, a heavy *deal* in stocks.

In Roman Catholic theology it is the cleansing of the soul from sin together with the infourings of sanctifying grace and the three theological virtues—faith, hope, and charity.

Regeneration is related to *sanctification* as birth is to growth. The soul's new life begins at regeneration. Its development in spiritual strength and stature is its *sanctification.* FRANCIS L. PATTON *Summary of Christian Doctrine* lesson x, p. 292. [P. B. P.]

7. *Ethics.* That which makes virtue morally obligatory, or which impels, binds, or furnishes a motive for man to seek it. (1) In utilitarianism, the knowledge of the painful or pleasurable consequences of an act, or the pleasure or pain itself consequent upon it. (2) The expectation of reward or punishment in another life, or such reward or punishment itself. (3) In essential morality, an internal confirmation or attestation of the moral character of an act, due to the conscience. (4) According to some evolutionists, the consequence, affecting an entire race, of the fact that races with moral instincts are better fitted to survive than those without them.

That asylum had formerly been respected by her greatest enemy, . . . it would not, she trusted, be violated by a brother-in-law. LINGARD *England* vol. v, ch. 4, p. 185. [E. C. '27.]

(8) Hence, any place of refuge.

In England this privilege extended to all crimes except treason or sacrilege, but the fugitive was required, within forty days after entering the sacred place, to go in sackcloth and make a detailed confession before the coroner, and abjure and depart the realm. In time abjuration became obsolete, and "sanctuary men" were allowed to stay in the privileged places under certain regulations. By the statute of 21 James I., c. 28, all privilege of sanctuary was abolished, but it was claimed illegally in certain places, at least as to civil process, as late as the time of George I. It still exists for debtors at Holyrood in Edinburgh, but is of no value, imprisonment for debt having been abolished.

San′skrit, *n.* The ancient and classical language preserved in the Hindu sacred writings belonging to the Indic class of the southern division of Aryan languages: opposed to *Prakrit* and modern dialects descended from it.

It is the oldest of the Aryan or Indo-European languages. Its copious literature begins with the Vedas (see VEDA), and dates probably from 2000 to 1500 B. C. It is still cultivated as a classical language, and is the sacred language of the Brahmans. See ARYAN; INDO-EUROPEAN; JATAKA; MAHABHARATA; PURANA; TUNTRA; UPANISHAD RAMAYANA.

The virtual mother of all these dialects [Hindustani, Gipsy, Prakrit, Pali] is the *Sanskrit*. For the last twenty-five centuries, at least, the *Sanskrit* has been no longer a proper vernacular language, but kept artificially in life, as the sacred dialect of Brahmanism and the cultivated tongue of literature and learning.

A Chromatic Scale.

The **major scales** are the scales of major keys, and the **minor scales** the scales of minor keys. The **diatonic scale** is a scale of diatonic or regular tones. The **chromatic s.** includes the diatonic tones and chromatic tones or semitones of a key in regular ascending or descending order from key-tone to key-tone. A scale may extend from any pitch of a key to its octave above or below, but its normal form is from key-tone to key-tone. *Scale* is often incorrectly used as a synonym of *key*. See KEY. In the modern major scale, when the tones are perfectly true, the number of vibrations producing the respective tones are to each other, whatever the key may be, in the ratio of the following numbers:

do	re	mi	fa	sol	la	si	do
24	27	30	32	36	40	45	48

From this series of numbers, together with the data given under PITCH, the vibration-number of any note may be found. Thus, if middle C is given by 270 vibrations per second, the G above it, which is *sol* when C is *do*, is given by $270 \times \frac{36}{24} = 405$. These ratios are modified on keyed instruments by the necessity of using each key for several notes, very near each other, but not precisely the same. See TEMPERAMENT.

Synonyms: pupil, student. The primary sense of a *scholar* is one who is being schooled; thence the word passes to denote one who is apt in school work, and finally one who is thoroughly schooled, master of what the schools can teach, an erudite, accomplished person; when used without qualification, the word is generally understood in this latter sense; as, he is manifestly a *scholar*. *Pupil* signifies one under the close personal supervision or instruction of a teacher or tutor. Those under instruction in schools below the academic grade are technically and officially termed *pupils*. The word *pupil* is uniformly so used in the Reports of the Commissioner of Education of the United States, but popular American usage prefers *scholar* in the original sense; as, teachers and *scholars* enjoyed a holiday. Those under instruction in Sunday-schools are uniformly designated as Sunday-school *scholars*. *Student* is applied to those in the higher grades or courses of study, as the academic, collegiate, scientific, etc. *Student* suggests less proficiency than *scholar* in the highest sense, the *student* being one who is learning, the *scholar* one who has learned. On the other hand, *student* suggests less of personal supervision than *pupil*, thus, the college *student* often becomes the private *pupil* of some instructor in special studies. Hist.* **1.** The philosophical and theological movement connected with the teaching of medieval doctors and universities, confined to no one school, but marked especially by its teaching of classical logic and philosophy as applied to theology and held in check by the assumption of the authority and rationality of theological dogma.

> The lifetime of medieval scholasticism extends from about A. D. 1000 to 1500. The earlier doctors were John Scotus Erigena, Lanfranc, Roscellinus, and Anselm of the 11th century, followed in the 12th century by Abelard, Gilbert of Poitiers, Peter Lombard, and John of Salisbury. Up to the 13th century it was controlled largely by the Aristotelian logic and the Neoplatonic philosophy; after that it was marked by full adaptation of the Aristotelian philosophy. In the 13th century scholasticism reached its height in Alexander of Hales, Albertus Magnus, St. Thomas Aquinas, and Duns Scotus, all great and systematic thinkers. At the close of this period the extension of philosophic investigation, the denial of the authority of dogma, and the break with church authority put an end to its development, and resulted in a theology independent of the Bible and often antagonistic to it. Throughout all the scholastic period the doctrines of realism and nominalism were much discussed in connection with theological questions.

> I need not remind you that *school* has, through a sequence of historical conditions, come to have a special sense in Oxford. These '*schools*' were originally the lecture-rooms of the professors of the University, and were also used for the periodical public examinations for degrees. When the College gradually usurped the teaching function of the University, or, as might be said, when they gradually advanced from supplementing its public teaching by their own individual collegiate tuition, the *schools* and lecture-rooms of the University became deserted, scholars no longer attended, and professors no longer lectured: they were, however, still thronged at examination times, as the University continued to retain the function of examining and giving degrees. And examination came thus to be the only use to which the 'scholars' were applied; hence, when an Oxford man is 'in the *schools* this week,' or 'taking his *schools* next month,' or 'has his *schools* on,' or 'breaks down during his *schools*,' the word means 'examination' for moderations or finals. And the group of studies that an honor-man takes as his subject are called his *school*, i. e., the subject that he studies and will be examined in.

sci'ence, sai'gns, *n.* **1.** Knowledge gained and verified by exact observation and correct thinking, especially as methodically formulated and arranged in a rational system; also, the sum of universal knowledge.

Science in the wide sense includes (1) *science proper*, embracing (*a*) exact knowledge of *facts* (historical or empirical science), (*b*) exact knowledge of *laws*, obtained by correlating facts (nomological science), and (*c*) exact knowledge of *proximate causes* (rational science); and (2) *philosophy*. See PHILOSOPHY. In the narrow sense of positive science the word is used as including only the first two divisions of science proper.

> Modern *science* may be regarded as one vast miracle, whether we view it in relation to the Almighty Being, by whom its objects and its laws were formed, or to the feeble intellect of man, by which its depths have been sounded, and its mysteries explored.
> BREWSTER *Natural Magic* letter i, p. 94. [TEGG '68.]

2. Any department of knowledge in which the results of investigation have been worked out and systematized: an exact and systematic statement of knowledge concerning some subject or group of subjects; especially, a system of ascertained facts and principles covering and attempting to give adequate expression to a great natural group or division of knowledge; as, the *sciences* of astronomy, botany, chemistry, and medicine; the *science* of theology.

The sciences are divisible into (1) the *mathematical*, treating of quantity, (2) the *physical*, treating of matter and its properties, (3) the *biological*, treating of the phenomena of life, (4) the *anthropological*, treating of man, and (5) the *theological*, treating of the Deity. See MATHEMATICS; PHYSICAL SCIENCES, under PHYSICAL; BIOLOGY; ANTHROPOLOGY; THEOLOGICAL SCIENCE, under THEOLOGICAL.

In the progress of human knowledge a science, in its earliest and simplest form, is usually a mere collection of observed facts, like the knowledge of the movements of the heavenly bodies possessed by the ancient Egyptians. The next step is to correlate or generalize these facts, forming a system like that of Ptolemy or Copernicus; the next, to formulate these generalizations as laws, as was done by Kepler; the final step, to proceed to some principle or force accounting for these laws, usually by the aid of mathematical analysis, as was done by Newton in his theory of universal gravitation. The tendency of modern physical science is toward this more complete generalization, its goal being the discovery of a principle that shall connect all physical phenomena. Compare INDUCTIVE METHOD, under INDUCTIVE; also, LAW, 7.

> By *Science*, as the word is here used, we mean a Systematic arrangement of the laws which God has established, so far as they have been discovered, of any department of human knowledge.
> WAYLAND AND CHAPIN *Elements Polit. Econ.* p. 4. [SH. & CO.]

3. Knowledge obtained individually by study of facts, principles, causes, etc.; the habit or possession of exact knowledge. **4.** Expertness, or ability to do, resulting from knowledge; exceptional skill acquired by intelligent practise; as, the *science* of a pugilist. **5.** Formerly, a trade or occupation. **6.** Either one of the seven liberal arts (grammar, rhetoric, logic, arithmetic, music, geometry, astronomy) embraced in the trivium and quadrivium: an ancient use. [F., < L. *scientia*, < *scio*, ppr. *scient(t-)s*, know.]

Synonyms: art, knowledge. *Knowledge* of a single fact, not known as related to any other, or of many facts not known as having any mutual relations or as comprehended under any general law, does not reach the meaning of *science*; *science* is *knowledge* reduced to law and embodied in system. The *knowledge* of various countries gathered by an observant traveler may be a heterogeneous medley of facts, which gain real value only when coordinated and arranged by the man of *science*. *Art* always relates to something to be done, *science* to something to be known. Not only must *art* be discriminated from *science*, but *art* in the industrial or mechanical sense must be distinguished from *art* in the esthetic sense; the former aims chiefly at utility, the latter at beauty. The mechanic *arts* are the province of the artisan, the esthetic or fine *arts* are the province of the artist; all the industrial *arts*, as of weaving or printing, arithmetic or navigation, are governed by exact rules. *Art* in the highest esthetic sense, while it makes use of rules, transcends all rule; no rules can be given for the production of a painting like Raffaello's "Transfiguration," a statue like the Apollo Belvidere, or a poem like the Iliad. *Science* does not, like the mechanic *arts*, make production its direct aim, yet its possible productive application in the *arts* is a constant stimulus to scientific investigation; the *science*, as in the case of chemistry or electricity, is urged on to higher development by the demands of the *art*, while the *art* is perfected by the advance of the *science*. Creative *art* seeking beauty for its own sake is closely akin to pure *science* seeking *knowledge* for its own sake. Compare ART; KNOWLEDGE; LITERATURE.

In a decision delivered at the October term, 1893, the Supreme Court of the United States held that the Great Lakes were seas, in the legal sense of the term, and assigned the following reasons:

> The Great Lakes possess every essential characteristic of *seas.* They are of large extent in length and breadth; they are navigable the whole distance in either direction by the largest vessels known to commerce; objects are not distinguishable from the opposite shores; they separate, in many instances, States, and in some instances constitute the boundary between independent nations; and their waters, after passing long distances, debouch into the ocean. The fact that their waters are fresh and not subject to the tides does not affect their essential character as *seas.* U. S. SUPREME COURT *U. S. Supreme Court Reports, 249, U. S. vs. Rodgers,* 150.

The indiscriminate use of the terms 'sea-lion' and 'sea-bear' for this species is objectionable, because the animal to which that of 'sea-bear' may be most properly applied is the true 'fur seal' (Callorhinus ursinus).

My uncle selected a very neat *seal*, the handsomest he had, being of pure metal, and having a real topaz in it, and offered it to Mary Warren, with his best bow. COOPER *Redskins* ch. 6, p. 100. [S. & T. '46.]

2. The impression made by such means upon the wax or wafer affixed to an instrument, or directly upon the substance of the instrument itself.

A *seal*, such as is known to the common law, is defined to be an impression upon wax, or some tenacious substance capable of being impressed. WASHBURN *Am. Law of Real Property* vol. ii, p. 571.

3. The wax or wafer affixed to a document to be impressed; also, a disk of paper used for the same purpose, or a mere impression, scroll, or mark on the paper.

By a statute of the United States an impression directly on the paper is sufficient as a seal, wherever a seal is necessary. In many States a scroll-seal is held to be valid, even in the absence of a statute, and the tendency is by statute to render the use of seals unnecessary, except by corporations.

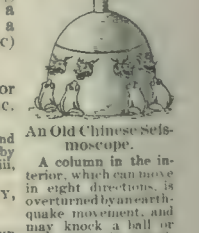
All practical seismometers record their observations automatically, and hence the names *seismometer* and *seismograph* are used almost interchangeably. Most of them are constructed on the principle of obtaining a steady point influenced as little as possible by the earth's motion, and then causing it to trace a record on an object connected rigidly with the earth, or vice versa. Compare SEISMOSCOPE.



Waves of commotion have been investigated by means of the pendulum and the *seismometer* with tolerable accuracy in respect to their direction and total intensity. HUMBOLDT *Cosmos* tr. by E. C. Otté *Earthquakes* in vol. i, p. 205. [H. '59.]

A column in the interior, which can move in eight directions, is overturned by an earthquake movement, and may knock a ball or balls from the mouth of one or more of the eight protruding dragons' heads into the mouths of the attendant frogs, causing them to vibrate. DARWIN *Descent of Man* vol. i, ch. 2, p. 59. [A. '71.]

'*Natural Selection*' . . . is an apparently positive name for a really negative effect, and is therefore an eminently misleading term. By '*Natural Selection*' is meant the result of all the destructive agencies of nature, destructive to individuals and to races by destroying their lives or their powers of propagation. Evidently the cause of the distinction of species (supposing such distinction to be brought about in natural generation) must be that which causes variation, and variation in one determinate direction in at least several individuals simultaneously.

—**sexual s.** (*Biol.*), in the theory of evolution, the operation whereby characters, as bright colors or fine song, considered as especially attractive to the opposite sex, tend to become perpetuated or enhanced; the part played by sex in natural selection.

The variations thus caused are preserved and accumulated by *sexual selection*, which is in itself an extremely complex affair, depending, as it does, on ardor in love, courage, and the rivalry of the males, and on the powers of perception, taste, and will, of the female. DARWIN *Descent of Man* vol. i, ch. 8, p. 287. [A. '71.]

The law of *sexual selection* is constantly belied by the frequent unions between privileged individuals and those of a very inferior type. E. DE PRESSENSÉ *Study of Origins* tr. by A. H. Holmden, bk. ii, ch. 4, p. 194. [H. & S. '83.]

The United States Senate is composed of two Senators from each State, chosen by its legislature for six years. The Senators are divided into three classes, in such a way that the term of one of these classes expires every two years. A Senator must be not less than thirty years old, must have been at least nine years a citizen of the United States, and must at the time of his election be an inhabitant of the State for which he is chosen. The senate is supposed to represent the several States as such, and not special popular constituencies. It is clothed to some extent with all three of the departmental functions of government — *legislative,* in conjunction with the House of Representatives; *executive,* in conjunction with the President in appointments to office and the formation of treaties; and *judicial,* as forming the high court of impeachment.

II. *i.* **1.** To despatch an agent, message, or messenger. **2.** *Naut.* Same as SCEND. [< AS. *sendan,* send.]
Synonyms: cast, delegate, depute, despatch, discharge, dismiss, emit, fling, forward, hurl, impel, lance, launch, project, propel, sling, throw, transmit. *Send* in its most common use involves personal efficiency without personal presence; according to the adage, "If you want your business done, go; if not, *send*"; one *sends* a letter or a bullet, a messenger or a message. In all the derived uses this same idea controls; if one *sends* a ball into his own beart, the action is away from the directing hand, and he is viewed as the passive recipient of his own act; it is with an approach to personification that we speak of the bow *sending* the arrow, or the gun the shot. To *despatch* is to *send* hastily or very promptly, ordinarily with a destination in view; to *dismiss* is to *send* away from oneself without reference to a destination; as, to *dismiss* a clerk, an application, or an annoying subject. To *discharge* is to *send* away so as to relieve a person or thing of a load; we *discharge* a gun or *discharge* the contents; as applied to persons, *discharge* is a harsher term than *dismiss.* To *emit* is to *send* forth from within, with no reference to a destination; as, the sun *emits* light and heat. *Transmit,* from the Latin, is a dignified term, often less vigorous than the Saxon *send,* but preferable at times in literary or scientific use; as, to *transmit* the crown, or the feud, from generation to generation; to *transmit* a charge of electricity. *Transmit* fixes the attention more on the intervening agency, as *send* does upon the points of departure and destination. —**Antonyms:** bring, carry, convey, get, give, hand, hold, keep, receive, retain. —**Prepositions:** to send *from* the hand *to* or *toward* (rarely *at*) a mark; send *to* a friend *by* a messenger or *by* mail; send a person *into* banishment; send a shell *among* the enemy.

sen-sa'tion, sen-sā'shun, *n.* **1.** *Psychol.* The conscious state resulting from the action, under stimulus, of some organ of sense; the faculty or power of having such state: an element in perception, but differing from it in complexity, and not involving, as the latter does, cognition of an object. See PERCEPTION.

The sensations include (1) *general sensation*, or that diffused over the whole system, or vaguely localized, as the sensations of warmth, cold, somnolency, muscular or nervous fatigue, and of motion or position, and (general in cause) hunger and thirst, (2) the *organic sensations*, connected with the action of the internal organs of the visceral and abdominal cavities; and (3) those of the *special senses*, such as those connected with the eye, ear, nose, tongue, skin (with sensations of pressure and temperature), muscles, and joints. In Locke's writings *sensation* often signifies sense-perception.

A *sensation* is that peculiar modification of consciousness which is ordinarily developed on occasion of the excitement of some organ of sense by the action of external stimuli. As distinguished from feelings which are subjective, *sensations* are those peculiar modifications of our consciousness by which the nature of sensible objects is made known to us. While *sensations* are connected with the body, *emotions*, as joy, grief, etc., are wholly of the mind. "As the most of them [the *sensations*] are positively agreeable or the opposite, they are nearly akin to those *emotions*, as hope or terror, or those passions, as anger and envy, which are acknowledged by all to belong exclusively to the spirit, and to involve no relation whatever to matter or the bodily organism. Such *feelings* are not infrequently styled *sensations*, though improperly." PORTER *Human Intellect* § 112, p. 128. [S. '70.] *Feeling* is a general term popularly denoting what is felt, whether through the body or by the mind alone, and includes both *sensation* and *emotion*. *Sense* is the organ or faculty of *sensation* or of *perception.*

It includes sensations both external and internal, whether derived from contemplating outward and material objects, or relations and ideas, desires, affections, passions. It also includes the sentiments of the sublime and beautiful, the moral sentiment and the religious sentiment; and, in short, every modification of feeling of which we are susceptible.

5†. Sensation or feeling. [< F. *sensibilité*, < LL. *sensibilita(t-)s*, < L. *sensibilis*, sensible, < *sensus;* see SENSATION.]

Synonyms: sensitiveness, susceptibility. *Sensibility*, in the philosophical sense, denotes the capacity of emotion or feeling, as distinguished from the intellect and the will. (Compare synonyms for SENSATION.) In popular use *sensibility* denotes sometimes capacity of feeling of any kind; as, *sensibility* to heat or cold; sometimes, a peculiar readiness to be the subject of feeling, especially of the higher feelings; as, the *sensibility* of the artist or the poet; a person of great or fine *sensibility*. *Sensitiveness* denotes an especial delicacy of *sensibility*, ready to be excited by the slightest cause, as displayed, for instance, in the "sensitive-plant." *Susceptibility* is rather a capacity to take up, receive, and, as it were, to contain feeling, so that a person of great *susceptibility* is capable of being not only readily but deeply moved; *sensitiveness* is more superficial, *susceptibility* more pervading. Thus, in physics, the *sensitiveness* of a magnetic needle is the ease with which it may be deflected, as by another magnet; its *susceptibility* is the degree to which it can be magnetized by a given magnetic force or the amount of magnetism it will hold. So a person of great *sensitiveness* is quickly and keenly affected by any external influence, as by music, pathos, or ridicule, while a person of great *susceptibility* is not only touched, but moved to his inmost soul.—**Antonyms:** coldness, deadness, hardness, insensibility, numbness, unconsciousness.

The fabric is then moved along a slight distance so as to be ready for another stitch. Various kinds of stitches are made by different machines, as the *chain-stitch*, the *interwoven stitch*, and the *lock-stitch*, this last being the firmest and most desirable for enduring work.

shale[2]†, *n.* Shell.—**shaled**†, *a.* Having a shell.

shall, shal, *v.* [SHOULD (SHOLD†, SHOLDE†).] [A defective auxiliary (formerly also a transitive verb), having no participles, imperative, or infinitive.] **1.** As an auxiliary verb: (1) Am to, or are to: expressing simple futurity: now ordinarily used in this sense only in the first person. (2) [SHALT, *2d per. sing.*; SHALL, *3d per. sing. & pl.*] Art to, is to, or are to: expressing subjection to a command, intention, constraint, obligation, promise, or permission.

The language of a moral law is, man *shall* not kill; the language of a Law of Nature is, a stone will fall to the earth. WHEWELL *Astron. and General Physics* intro., ch. 2, p. 7. [W. P. '36.]

It had not occurred to them that civilization itself might engender the barbarians who *should* destroy it. MACAULAY *Speeches, Re-election to Parliament* in vol. ii, p. 278. [T. '52.]

Shall and *will* are used as auxiliaries in the simple future tense as follows: I *shall;* thou *will;* he *will;* we *shall;* you *will;* they *will*. As auxiliaries expressing a determination, threat, command, or permission, their use is precisely the opposite, as follows: I *will;* thou *shalt;* he *shall;* we *will;* you *shall;* they *shall*. The exceptions are numerous, and the distinction between the two forms constitutes one of the most difficult things in the language for the foreigner to master. For instance, the form of the absolute future may be chosen to express determination in a prophetic way; as, you *will* rue this. On the other hand, the imperative form may be used in foretelling to imply a wish or an opinion of the speaker; as, they *shall* all get their deserts. In interrogations the form required in the answer is sometimes adopted in the query; as, *Shall* you not come to see us? I hope I *shall*. In the potential or conditional mode *shall* and *should* express simple futurity; as, *should* he come; if we *shall* ever learn; whoever *shall* get her will have a treasure; as soon as you *shall* find out. In indirect discourse, *shall* may be used as well as *will* when the idea of volition or control attaches to the second or third person; as, he told me that he *should* do it; they write that they *will* come. *Should* has also certain meanings independent of its relations as the imperfect of *shall*. In the United States, *shall* is being supplanted by *will*.

The characteristic distinction of both consists in this, that *shall* points originally to the dependence or obligation imposed upon the subject by the determination of a foreign will, which may be taken as a command, as a moral obligation, or even as a physical necessity, whereas *will* denotes the subjective resolve and inclination of the agent. But if, as happens in English, the import of both verbs is weakened into a periphrasis of the future, it is indeed hard to see why to the first person I *shall* die a second thou *wilt* die must correspond. In fact the matter is reversed in dialects, so that the North, and particularly Scotland, gives the preponderance to *will* for the first person. MAETZNER *Eng. Gram.* tr. by Grece *Futures of the Present* in vol. ii, pt. ii, § 1, p. 80. [E. BROS. '74.]

This word has been conjecturally derived from the French *chien,* dog, insultingly applied to Jews during their early persecution by the Normans in England. sheep, shīp, *n. sing. & pl.* **1.** A hollow-horned ruminant of the genus *Ovis;* specifically, *O. aries,* the common sheep, domesticated throughout the world in many breeds, and of uncertain origin.

They are roughly distinguished from goats, their nearest allies, by the heavy trigonal and somewhat twisted horns, which are larger in the ram, coil outward, and are transversely ridged; by the absence, usually, of any beard or strong odor in the males; and by the presence of interdigital glands in all four feet; but these distinctions do not hold good in all cases. The male of the sheep is a *ram,* the female a *ewe,* the young a *lamb,* and a company is a *flock.* The flesh of the adult is *mutton;* of the young, *lamb.* The domestic sheep is kept chiefly for its wool, one of the staple clothing-materials of the world, and for its flesh. Of wild sheep a dozen species are recognized, each designated by some special name, as *argali, bighorn* (an American species; see illus. under NAYAUR), etc., defined elsewhere.

Sheep are essentially inhabitants of high mountainous parts of the world, for dwelling among which their wonderful powers of climbing and leaping give them special advantages. . . . By far the greater number of species are inhabitants of the continent of Asia.

When the mikado adopted the Chinese military system, about the 6th century A. D., in order to subdue the aborigines, he conferred this title on the commanders of his expeditionary armies. In time it became the custom to grant the office to one of the two noble clans of Taira and Minamoto, whose rivalries caused the civil wars of the 10th and 11th centuries. The title gradually became hereditary in some branch of the Minamoto clan, of which the Tokugawa line, beginning with Iyeyasu, held it from 1603 to 1867, when the last shogun resigned and the office was abolished. Under the shogunate a sort of feudalism, supported by daimios, was established in Japan, and the shogun completely obscured the mikado, in whose name he professed to rule, the relation resembling that of the mayors of the palace to the last of the Merovingian kings of the Franks. The capital of the shoguns was at first at Kamakura in Sagami, and then at Yedo, while the mikado resided constantly in Kioto. See *Encyc. Brit.* art. *Japan*.

Consonant-signs from selected English, French, and German systems.

In the English language the number of simplified alphabets used to facilitate such abbreviation has been very great—201 having been invented and more or less used from the beginning of the 17th century, when the art was revived after having been for centuries disused, to the year 1887, when Isaac Pitman introduced his system, called by him at first *stenographic sound-hand*, and later *phonography*. Since then about 300 more, many of them based upon Pitman's or proceeding along similar lines, have been devised. In modern classifications of shorthand a system in which the *a b c* alphabet is used, and the shortening effected by arbitrary contractions and symbols, is properly *stenography*, while a system in which elementary sounds are expressed phonetically by arbitrary signs, used singly or in combinations, is called *phonography*. A joined and simplified form of phonography is also known as *tachygraphy*. (See these words.) The illustration shows the signs for several consonants used in eight English systems, one French, and one German. As to these systems and their authors, Willis was the second author who published a book on shorthand (Bright, 1588, being the first); Shelton's system is that in which Samuel Pepys wrote his "Diary"; Gurney's system was founded on Mason's and used in parliamentary reporting; Towndrow used a set of stroke vowel-signs; and Cossard's system is still the basis in principle of French stenography, which is widely different from English systems. The German systems are mainly cursive.
